THE ILLINOIS

State Normal University

NORMAL, ILLINOIS.

FORTY-THIRD YEAR.

FOR THE ACADEMIC YEAR ENDING JUNE 21,

Board of Education of the State of Illinois.

HON. WILLIAM H. GREEN, Cairo, President.

HON. ALFRED BAYLISS, Springfield, Ex-Officio Member and Secretary.

ENOCH A. GASTMAN, Esq., Decatur

CHARLES L. CAPEN, Esq., Bloomington

WILLIAM R. SANDHAM, Esq., Wyoming

E. R. E. KIMBROUGH, Esq., Danville

MATTHEW P. BRADY, Esq., Chicago

MRS. ELLA F. YOUNG, Chicago

PELEG R. WALKER, Esq., Rockford

M. E. PLAIN, Esq., Aurora

FORREST F. COOK, Esq., Galesburg

JAMES H. NORTON, Esq., Ravenswood

M. W. SHANNAHAN, Esq., Chicago

JACOB A. BAILY, Esq., Macomb

GEORGE B. HARRINGTON, Esq., Princeton

F. D. MARQUIS, Esq., Bloomington, Treasurer,

FACULTY.

ARNOLD TOMPKINS, A.M., Ph.D., PRESIDENT, Philosophy of Education.

HENRY McCORMICK, A.M., Ph.D., VICE-PRESIDENT, Professor of History and Geography.

BUEL P. COLTON, A.M., Professor of Biological Sciences.

DAVID FELMLEY, A.B., Professor of Mathematics.

O. L. MANCHESTER, A.M., Professor of Ancient and Modern Languages.

J. ROSE COLBY, Ph.D., PRECEPTRESS, And Professor of Literature.

MANFRED J. HOLMES, B.L.,
Professor of Psychology and General Method.

JOHN J. WILKINSON, Ph.D., Supervisor of Practice.

MARY, HARTMANN, A.M., Assistant in Mathematics.

CLARISSA E. ELA, Teacher of Drawing.

EVA WILKINS, Assistant in History and Geography.

AMELIA F. LUCAS, Teacher of Reading.

B. C. EDWARDS, Teacher of Physical Culture.

ELIZABETH MAVITY, Teacher of Grammar,

FREDERIC D. BARBER, B.S., Teacher of Physical Science.

IRENE BLANCHARD, B.A., Assistant in Languages.

ELMER W. CAVINS, Teacher of Penmanship and Orthography.

MRS. IDA GOVE, Teacher of Music.

LIDA B. McMURRY, Assistant Training Teacher, Primary Grades.

MAUD VALENTINE, Assistant Training Teacher, Intermediate Grades.

ANNE A. STANLEY, Assistant Training Teacher, Grammar Grades.

FRANK S. BOGARDUS, Principal of Practice School.

CHARLES S. WHITTEN, Principal Second Intermediate.

FRANK J. GEORGE, Principal First Intermediate.

WILL H. JOHNSON, Principal Second Primary.

ANNABELLE MELVILLE, Principal First Primary.

ANGE V. MILNER, Librarian.

CHESTER D. MARQUIS, Assistant Librarian.

FLORA P. DODGE, Stenographer,

CALENDAR FOR 1900-1901.

The school year of forty-two weeks is divided into three terms of twelve weeks, and a summer term of six weeks.

FALL TERM.

September 10, 1900, Fall Term begins. November 28, Fall Term ends. Vacation of three days.

WINTER TERM.

December 3, Winter Term begins.

December 5, Semi-annual Meeting of the Board of Education.

December 20, Annual Contest of Literary Societies.

December 22, Vacation of nine days.

December 31, Winter Term resumes.

February 28, 1901, End of Winter Term.

Vacation of ten days.

SPRING TERM.

March 11, Spring Term begins.

May 29, Annual Meeting of the Board of Education.

May 29, Annual Meeting of the Alumni.

May 30, Annual Commencement Exercises.

SUMMER TERM.

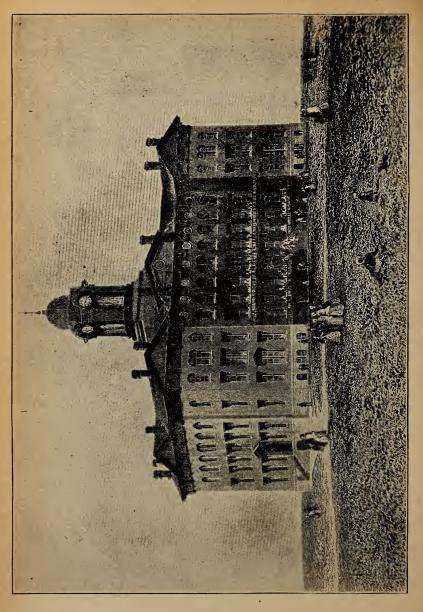

June 3, Summer Term begins.

July 13, Summer Term ends.

September 9, Beginning of Fall Term of year 1901-2.

Early History of the Illinois State Normal University.

HE Illinois State Normal University was established by act of the Legislature in 1857. The statute providing for its location directed the governing board to solicit bids from competing points. Four cities were especially interested in securing it. Bloomington, McLean county, having offered the most favorable inducements, was selected as the location of the school. In October, 1857, the school began its sessions in rented rooms in the city of Bloomington. In September, 1860, it was removed to what was then known as North Bloomington, where a commodious building had been erected for its accommodation. The suburb of North Bloomington subsequently became a separate town under the name of Normal. It has a population of about 4,000. It is a very desirable place of residence, having those qualities which are especially characteristic of school towns. The charter provides that intoxicating liquors shall never be sold within the limits of the town. There are no resorts that are in any respect objectionable. Electric cars connect Normal with Bloomington.

ILLINOIS STATE NORMAL UNIVERSITY.

Material Equipment.

HE NORMAL SCHOOL is comfortably housed in three buildings. The older contains three stories and a basement. It is about 100 by 160 feet. It is built of brick and cost originally about \$120,000. The basement contains the dressing rooms, the chemical laboratory, and several store-rooms. On the first floor are the offices, two spacious rooms for drawing classes, two assembly rooms and two class rooms. On the second floor are the main assembly room and eight class rooms. On the third floor are the halls of the two literary societies and a large auditorium.

The Practice School building is a substantial brick structure of two stories and a basement. The basement contains play rooms and dry closets. On the first floor there are five school rooms, each having a seating capacity of forty pupils. There is, also, a smaller room that is used for recitation purposes. On the second floor there is a room for the grammar grade, with a seating capacity of 150. In addition to this there are ten recitation rooms; each is sufficiently large to accommodate a class of twenty-five.

The third building is 100 by 125 feet and contains the gymnasium, bath rooms, library, and science rooms. The cut on the fourth page of cover shows it as seen from the east.

The three buildings are heated from a commodious boiler house which is equipped with three boilers.

The chemical laboratory is well adapted to the needs of the school. The physical laboratory is well equipped with apparatus. The museum contains a large collection of specimens. The science department is furnished with an excellent lantern, and is also supplied with a steam pump for the compression of gases.

The campus contains fifty-six acres and affords abundant room for tennis and other out-door exercise.

There is a valuable reference and circulating library of 11,000 bound volumes and 4,000 pamphlets. These books have been carefully selected and there are scarcely any useless volumes in the collection, while new and desirable additions are being constantly made.

Students are allowed the free use of the reading-room and may draw out books without charge. The department is open eight and one-fourth hours of every school day and four hours on Saturday, and the librarian and assistant are always in attendance. The privilege of access to the shelves has been established and the librarian gives instruction on the use of the library in a set of informal talks and practical lessons. It is the aim of the teachers and librarian to help the students to cultivate a familiarity with good literature and with the use of books, and to give them the best possible assistance in doing their reference work.

Student Organizations.

Literary Societies.—There are four excellent literary societies connected with the school—the Wrightonian, the Philadelphian, the Ciceronian, and the Sapphonian. These are all in flourishing condition, and afford abundant practice in oratory, debate, essay writing, and Parliamentary Usage. These societies have well furnished rooms set aside for their use.

Christian Associations.—New students will receive a hearty welcome to the Young Men's and Young Women's Christian Association of the Normal School. These organizations are vigorous and active, and seek earnestly to promote the spiritual welfare of the students. While they are separate organizations, union meetings are regularly held. As their names imply, they are Christian associations. All members of evangelical churches may become active members, while others may become associate members.

Oratorical Association.—This association had its origin in the winter term of 1889, the prime mover being Mr. Charles Beach, an enterprising student. Although Mr. Beach left the school several years ago, his interest in the association is evinced by the fact that he made provision for an annual prize of one hundred dollars and a gold medal to the winner of the preliminary contest; the same to be known as the Beach prize. Annual contests were held until the year 1895-6, when the association sent a representative to a meeting of delegates from the Normal schools of Kansas, Iowa, Illinois, Wisconsin, and Missouri, who met for the purpose of organizing an Inter-State League of Normal Schools. As a result of that meeting an association was formed and the first oratorical contest was held at Warrensburg, Mo., May 8, 1896.

Mr. Beach has recently offered a new annual prize of seventy-five dollars and a gold medal for the winner in a declamatory contest, entrance to which shall be limited to the women of the school. The Students' Lecture Association.—The students elect annually a lecture board who provide a course of high-class lectures and concerts at low cost. The course of 1899-1900 contained ten numbers.

The Athletic Association.—This organization has general control of all student athletics in conjunction with the director of the gymnasium.

Student Publications.—The VIDETTE is a 32-page monthly filled with local news, alumni notes, and practical and interesting matter on school topics contributed by faculty and students. The best literary productions of the school find a place in its columns.

The INDEX, published annually by the senior class, contains detailed information in regard to the various student organizations, group portraits of contest teams, glee clubs, officers, committees, etc. Aiming especially to present the gayer features of student life, it becomes a chronicle of the humorous happenings of the year.

Conditions of Admission.

All applicants for admission are required:

- To be, if males, not less than 17, and if females, not less than 16 years
 of age.
- To file a certificate of good moral character, signed by some responsible person.
- To sign a declaration of their intention to devote themselves to schoolteaching in Illinois for as long a period as they attend the Normal school.
- 4. To pass a satisfactory examination given by the faculty, or to present one of the following evidences of scholarship:
 - a. A first-grade Teacher's Certificate.
 - b. An appointment by a County Superintendent of Schools.
 - c. A certificate of attendance at another State Normal School or at the University of Illinois.
 - d. A High School or College Diploma.

The entrance examination given by the faculty is in Reading, Arithmetic, Geography, History of the United States, English Grammar and Orthography.

An appointment may be secured from the County Superintendent by successfully passing an examination about equivalent to that required for a second-grade certificate.

Each county in the State is entitled to appoint two pupils, and each representative district is entitled to appoint, in addition, as many pupils as there are members of the General Assembly from that district. Single counties constituting a senatorial district are, therefore, entitled to six pupils; senatorial districts comprising two counties, to eight pupils; those comprising three, to ten pupils; and so following. In districts composed of two or more counties, Superintendents desiring to appoint more than two candidates should confer with the other Superintendents in the district for an allotment of the appointments.

Accredited High Schools.

Graduates of High Schools with four-year courses, accredited to the University of Illinois, are admitted to Section F, and, a Course of Study leading to graduation in two years, if their high school course, as attested by certificate of principal, has included the work stated below, and provided that the work of the high school in these branches is accepted at the State University.

ALGEBRA—At least one year's work, including quadratics.

GEOMETRY—One year's work, including all of Plane Geometry as treated in such text-books as Wentworth.

Physics—One year's work, including laboratory practice.

CHEMISTRY—One-half year's work.

ZOOLOGY—One-half year's work. BOTANY—One-half year's work.

Physiology—One-half year's work.

Province Charles and helf wards

PHYSICAL GEOGRAPHY—One-half year's work.

CIVIL GOVERNMENT of United States and of Illinois—One-half year's work.

GENERAL HISTORY—One year's work; Myer's General History or its equivalent.

LITERATURE—Daily practice in Composition for one year or its equivalent. Elementary instructions in the principles of rhetoric, and at least two years' work with daily recitations in the study of complete masterpieces in prose and poetry.

Students of such high schools not having completed all the work described above will be admitted to Section F in all branches in which they comply with the conditions stated above.

EXPENSES.

The following estimate of necessary expenses is approximately correct:

Tuition			Free		•
Board, 42 weeks			\$100.00	to	\$140.00
Washing			15.00	to	25.00
Books and stationery			10.00	to	15.00
Total			125.00	to	180,00

An incidental fee of \$2.00 per term is charged except for the Summer Term of six weeks, for which the fee is \$6.00.

Good rooms and excellent boarding places are abundant. Arrangements can be made after arriving here better than by letter.

Students are advised to bring with them such books as they may have, but not to purchase others until they arrive at Normal. Students arriving on the Illinois Central Railroad and on local trains on the Chicago & Alton Railway should come to Normal station. Students coming to Bloomington on the limited trains on the Chicago & Alton and on other railroads can reach Normal by street cars. In no case is the hiring of a carriage necessary.

ORGANIZATION OF THE SCHOOL.

THE ORGANIC PARTS.

I. The Theoretical. 2. The Practical.

Not a Normal School and a Practice School, but a Normal School with its two functions of Theory and Practice. Hence, there must be constant coöperation, and direct back and forth relation, that the theories expounded may be adequately embodied in practice.

I. The Theoretical.

- Department of Philosophy of Education—the universal law expounded.
- 2. Department of General Method—the Logical and the Psychological movements of thought in learning.
- 3. Department of Special Methods, with a department for each leading subject. These departments to be in direct organic relation to the foregoing. The Philosophy of Education and the laws of General Method must be made to appear in each subject.
- 4. Department of the Science and Art of Instruction.

The purpose of this department being to reduce the foregoing to the concrete act of instruction, this department must be kept in closest touch with the preceding, while it faces immediately and directly to the Practice School. This is the transition from theory to practice.

II. The Practical.

- I. As a Model School Faculty, from the Primary through the High School, to exemplify, for observation and study, the theories previously promulgated. To this end there must be direct back and forth connection between this faculty and the preceding, especially with the departments of special method. The professors in the latter must shape, in general, the course in their respective lines throughout the Practice School. The Department of the Science and Art of Instruction must find here models of art to illustrate his principles.
- 2. As a Faculty of Criticism, who, under the leadership of the Professor of the Science and Art of Instruction, directs the practice work of the pupil teachers. In this function this faculty is freed from the control of the other faculty, as specified above. In this the Practice School has a new meaning, in that pupils practice to gain skill: while in the other practice was to exhibit theory,—to make the ideal appear in the real.

THE COURSE OF INSTRUCTION.

THE AIM.—The State should not put its stamp of approval on a student as qualified to teach until he can conduct rationally the process of education; that is, conduct the process under conscious guidance of a universal principle. Thus a Normal school is a school in the philosophy of method, for it seeks to bring all the diversity of details in the practice of teaching under the control of a single law. Thus the work of the Normal school is definitely held in the relation of universal law in Theory and individual details in Practice; giving rise to the two aspects of the Normal school organization, that of Theory and that of Practice.

The Basis.—Such work requires a good degree of maturity and scholar-ship; such at least as that represented by graduates of a good high school having a four-year course. These, with students having equal ability through maturity, study, and experience, constitute what may be considered typical students for the course of instruction as required by the foregoing aim. While a higher degree of scholarship is very desirable, such students, since they are the completed product of the general public school system, form the practical upper limit of admission to the Normal school course. Yet there are many students who, without the technical qualification of the high school graduation, make as strong students for the Normal school as the foregoing, and are admitted; but more time may be required to reach the professional standard set up.

A student should make the most of his home school opportunities before entering the Normal. The Normal school does not exist to do the work of the public school, whether of the grades or of the high school. The same subjects are treated, but from a professional standpoint. Neither a common school nor a high school graduate knows the subjects completed in a way to wield them with precision and effect as educational instruments. Even a college graduate is not expected to have a teaching knowledge of either the common or the high school branches. All these subjects, therefore, must be reconstructed from a higher point of view and from an educational standpoint. The Normal school assumes academic knowledge of subjects, whether they be common or high school subjects; and, on this basis, reduces them to educational instruments.

THE MEASURE OF THE WORK BY CREDITS.—By "credit" in the following course is meant the amount of work done in a given subject by the

typical student in a term of twelve weeks, reciting five times a week.

Twenty-four credits are required for graduation.

Let it be observed that only professional credits are given. A student who is already reasonably proficient in arithmetic, or-grammar, or physics, gives a term of work to the pedagogy of each of these subjects, and receives a professional credit in each; but if the student's academic knowledge of these subjects is so deficient as to require two terms to reach the same pedagogical proficiency in each, he receives in each but one credit. Thus the Normal school is required to do much academic work prerequisite to strictly professional work; but this work does not appear as credits in the course. So much, at least, should be done as a protest against the conditions under which the Normal school has to labor, and as a basis for insisting, more and more, that the student make the best possible academic preparation before entering the Normal.

While the Normal school thus works under a single professional standard there are different specialized courses made on a professional basis. If the pupil desires to make a specialty of primary work, or of school supervision; or to become a special teacher of mathematics, or science, or Latin, or English, he is permitted to make six credits in his chosen line and to substitute the extra credits thus made above the regular required amount for others least in the line of his purpose, as provided for in the Departmental statements given below.

THE ORGANIZATION INTO CLASSES BY TERMS.—Since credits are given by terms, the term rather than the year is the unit of classification. The typical student is supposed to complete the course in six terms, making four credits each term, as indicated by the distribution of work into terms given below. The lowest entering class, usually those received by examination and by appointment, will not usually complete the course in less than eleven or twelve terms; while less time is required of those who have a partial or a three-year high school course. Between the lower and the upper limit of admission there is a gradual ascent in the ability of students; and this fact must be as completely recognized as possible in their classification. Besides this close classification by terms, pupils are shifted from class to class, in one subject or in all of them, as their welfare may at any time require. The work is thus adapted, in the process of instruction, to the individual needs of the student. Hence no definite time for graduation can be fixed beforehand. All that can be said is, that the scholarship attained before entering the Normal or while the Normal course is in progress, must be equivalent to that represented by graduation from a four-year course in an approved high school; and to this must be added the strictly professional course described below.

Four views of the course are presented; First, The Logical View; which presents the course in the process of passing from the universal law of teaching to details in practice; or, in rising from the details of practice to the universal law which controls those details. This movement may be called the Normal school process, and is the basis for the whole external organization of the school. Second, The Distribution of the Work by Terms. For practical, as well as for psychological reasons, the student cannot pursue the work in its strictly logical development; and this necessitates the arrangement of the course into a working order by terms. Third, The Statement of Work by Departments. This shows the organization of work in each department and how the academic deficiencies of students are provided for before or while the professional course is in progress. Fourth, A Synoptical View, showing approximately the relative position of classes, entering with different preparation as described above at any time during THE LOGICAL VIEW OF THE COURSE. the course.

I. Universal Method in Education—Philosophy of Education.
a. In its Ethical, in its Logical, and in its Esthetical aspects
b. The School as the Organized Social Instrument of Education, including the History of Education 1 credit
2. General Method in Education, as modes and phases of the foregoing; or laws of learning irrespective of particular subject matter—Logical and Psychological
3. Special Methods in Subjects, both Logical and Psychological, including the distinct attitude of life and type of thought required in each subject, with function in life development. Special method in the sense of special types of thought and life, as distinctly marked by the following:
a. Method in Mathematics
b. Method in Physical Science' credit
c. Method in Biological Science 2 credits
d. Method in Psychological Science credit
e. Method in Sociological Science
(1) Method in Sociology and Economics 1 credit
(2) Method in Geography
(3) Methods in Civics and History 2 credits

f. Method in Modes of Expression:
(1) In Physical and Oral Expression credit
(2) In Graphic Art credit
(3) In Language:
a. From the Linguistic point of view 1½ credits
b. From the Rhetorical and Literary point of
view
c. Work in Foreign Languages as provided for under Departmental Statement.
(4) In Music, 1 credit, to be substituted as indicated below.
4. The Science and Art of Instruction.
a. The Psychology of the Teaching Process, including the Science and the Art of the Recitation and School
Management in General credit
b. Practice in Teaching under the immediate guidance of
"a" and remote of "3", "2", and "1" 3 credits
Total Credits
Drampington on Mills Company by Thomas

DISTRIBUTION OF THE COURSE BY TERMS.

*First Term.

- 1. The Psychology of the Teaching Process; and the Science and the Art of the Recitation; with observation and interpretation of work in the Practice School.
- 2. Method in Arithmetic—Logical and Psychological; with observation and interpretation of work in the Practice School.
- 3. Method in Biology, including Nature study for the grades; with observation of work in the Practice School.
- 4. Method in Rhetoric, or Discourse—Logical construction, with application to both the art of Constructing and of Interpreting Discourse; including Composition for the Grades.

Second Term:

 General Method of Life Development, and of Processes of Thought, as determined by the Laws of the Mind of the learner and by the Relations in the Object to be learned.

^{*}All terms are 12 weeks, and all recitations 5 hours per week.

- Logical and Psychological Method in Physiology, including observation and interpretation of work in the Practice School.
- Method in Grammar, or in the study of the Sentence; including a course of Language Lessons for the grades; with observation.
- 4. Method in Reading—Primary, Intermediate, and Advanced—as based on the laws of discourse revealed in the first term (6 weeks). Logical construction of Geography (6 weeks).

Third Term:

- The Logic of Algebra, and its development through the grades into the high school; with observation. Music may be substituted.
- The Logical and Psychological construction of Geography, including course of study; with observation.
- 3. Method in Physical and Oral Expression.
- Practice in teaching, under definite planning of lessons and criticism of execution, by the laws of pedagogy so far as revealed.

Fourth Term:

- Method in Psychology, connecting with biology and sociology, including scope, value, and character of the study in the public school.
- Scope and Method of work in Social and Economic Science for the public school, including its shaping influence on the other studies and on school management.
- 3. Method in Physical Science, including course of study for the grades, with observation in Practice School.
- 4. Method in Art Education.

Fifth Term:

- The Philosophy of Education.—The ultimate principle developed and shown to control all the aspects and details of teaching.
- Method in Civics and U. S. History, utilizing social and economic conditions; with observation.
- 3. Method in Writing and in Word Study (6 weeks). Method in Geometry, including Geometry for the grades (6 weeks).
- Practice in Teaching, with planning of lessons and criticism under the laws of Pedagogy so far as developed,

Sixth Term:

- Philosophy of Education continued, including the Philosophy of School Organization, Management and Supervision. Music may be substituted if not taken above.
- 2. Method in Ancient History, with course of historic study through the grades and the High School. Music may be substituted if not taken above.
- Method in Literary Interpretation, as determined by the nature of Beauty and laws of Art; with course of literary work through the grades and the High School.
- 4. Practice in Teaching and Managing, with criticism of lesson plans and of skill in execution; the work now being tested by universal laws.

STATEMENTS OF COURSE IN DEPARTMENTS.

PHILOSOPHY OF EDUCATION.

PURPOSE.—To develop the Ultimate Principle in Education, and to illustrate its powers in controlling all the details of life and school work; and not merely technical and school education but all the instrumentalities of man's developments.

FIRST TERM, OR FIFTH IN THE COURSE.

- I. THE ETHICAL ASPECT OF THE PRINCIPLE.—(a) As tension between the Actual and the Potential, or Real and Ideal,—the law of Egoism and the Ultimate Aim of Education. (b) As tension between Subject and Object,—the law of Altruism in Education. (c) The unity of "(a)" and "(b),"—true Egoism and Altruism only aspects of the same tension in life. (d) The pervasive influence of this principle in the details and phrases of education.
- 2. THE LOGICAL ASPECT OF EDUCATION.—(a) As determined through the tension between the Individual and the Universal—the preceding tension objectified. (b) The organic phases of the process ascertained and reduced to the details of instruction, utilizing the work done in General Method. (c) The tension in its organic relation to the two preceding all as organic phases of a single process of life and learning.

SECOND TERM, OR SIXTH IN THE COURSE.

- I. THE ESTHETIC ASPECT OF EDUCATION.—(a) The nature of Beauty as defined by each of the tensions considered above. (b) The Esthetic interpretation of the world—the process and the value. (c) The Principle of Art and Literary Interpretation. (d) The organic connection of this with the preceding tensions—unity of Duty, Truth, and Beauty.
- 2. THE PHILOSOPHY OF SCHOOL ORGANIZATION, SUPERVISION, AND MANAGEMENT.—(a) The Nature of Institutional life in general. (b) The fundamental Law of the School. (c) The logical evolution of the school through its fundamental law. (d) The Historic Development of the School, and differentation from other institutions. (e) The school at work under the law of its constitution. (f) The Social and Ethical Training in the working of the school as a spiritual organism.

THIRD TERM-AN OPTIONAL CREDIT.

This is given in the summer term only, and may be taken as an extra credit by those who wish to emphasize general pedagogy. It consists of an educational interpretation of the leading systems of philosophy from the Greeks to the present, with an interpretation of the theories and systems of education as propounded by educational reformers, including the historical development of educational ideals and systems.

GENERAL METHOD.

PURPOSE AND BASIS.—General Method is based on the analysis of the learning process made in the first term. In that the recitation experience, including its value, was analyzed. This was to enable the student to enter into the immediate consciousness of the pupil in the recitation. Now the more general laws of life development and modes of learning are to be sought—method general to all experience and to all subject matter.

- The general laws of the mind's development, as determining the fundamental Aim and Process in education.
- 2. The subjective phases of the mind's development toward freedom through its relation to the objective world.
- 3. The mind's methods of entering into unity with the objective world.
 - a. The mind's movement in learning any individual object.
 - The double aspect of every individual illustrated in various subjects of study.

- (2) Thinking the individual as it is at a given time, as having coexisting attributes and parts. Description, with all the relations involved in that process.
- (3) Thinking the individual as changing, or as having successive attributes and parts. Narration, with all the relations involved in that process.
- b. The mind's movement in learning a general object.
 - (1) The process of seeking the General through the Individual for the sake of the General—Exposition, through Definition, Division, Comparison and Contrast, and Exemplification. The order and uses of these processes in all learning. Their relation to the foregoing.
 - (2) The process of applying the General to the Individual for the sake of Individual—Argumentation, in its various forms of Induction, Deduction, and Identification; and a priori and a posteriori Arguments.
 - (3) The application of all these to all subjects of study; and relation to the foregoing.
 - (4) The mind's universal movement under the relation of Individual and General; either in the form of Organic or Class unity, from the Individual to the General and back to the Individual for the sake of the Individual.
 - (5) Method of constructing a subject under its genetic principle.
 - (6) The foregoing gathered up into the law of finding the self in the object under consideration.

METHOD IN ARITHMETIC.

Course 1. Method in Arithmetic for the First Six Grades (12 weeks).

THE PURPOSE: To arrive at the logical order of number knowledge, to derive its processes from simple counting, and to develop and illustrate the principles and methods of instruction in the primary and intermediate grades, with observation and analysis of work in Practice School. The Illinois State Course of Study forms the basis of the work.

This course is required of all students. Graduates of approved high schools need take no other course. Students with partial high school courses should take as prerequisite Course 2. Students without high school training or its equivalent should take as prerequisites Courses 3 and 4, instead of Course 2.

Course 2. Percentage and Mensuration (12 weeks).

The purpose of this course is to arrive experimentally at modes of measuring areas and volumes, the processes of evolution, and the laws of similar figures, and to inform the students as to the conditions that obtain in carpeting, papering, land and lumber measure, the measurement of heights and distances, and practical problems in commercial applications of percentage, with lesson planning. It includes all the topics of the seventh and eighth years of the State Course of Study.

Course 3. Percentage and Business Arithmetic (12 weeks).

The cases of percentage as related to fractions and integers, Profit and Loss, Commission, Stocks, Interest, Insurance, Banking and Exchange, Compound Interest, and Annuities. The course is devoted mainly to teaching the usages of the commercial world in these subjects.

Course 4. Inductive Geometry and Mensuration (12 weeks).

The principal truths of plane and solid geometry are developed experimentally and applied to practical problems in mensuration. This course is intended for students who have never studied geometry.

METHOD IN ALGEBRA.

The function, scope, and logical order of Algebra, its relations to arithmetic, its notation and fundamental ideas. Principles derived inductively from concrete problems, and afterward by rigorous deduction from definitions. Especial attention is paid to the language of Algebra, to describing and relating algebraic processes, and to the mode of developing the more difficult topics. The work includes quadratics and series, and is offered in three forms.

Course 1. Wentworth's New School Algebra, Chapters i-xx (12 weeks).

Prerequisites: A strong high school course in Algebra equal to requirement of the best colleges.

Course 2. Algebra through Fractional Equations, Chapters i-x (12 weeks).

Course 3. Elimination, Roots and Quadratics, Chapters xi-xx (12 weeks).

These courses are for students that have had only a partial course in

Algebra. Together they count as one credit, the equal of Course 1.

Course 4. Literal Arithmetic, Factoring, Equations, Chapters i-viii (12)

weeks).

Course 5. Fractions, Elimination, Theory of Exponents, Chapters ix-xvi

(12 weeks).

Course 6. Radicals, Quadratics, Ratio, Series, Chapter's xvii-xxiv (12 weeks).

Courses 4, 5, and 6 are for students that have not studied Algebra. They count as one credit, the equivalent of Course 1.

METHOD IN GEOMETRY.

Course 1. Form Study in the Grammar Grades (6 weeks).

A brief examination of the methods of Inductive Geometry, the making and drawing of geometrical forms, and an outline of a course in this branch. Prerequisites: A thorough course in Plane Geometry as taught in our best high schools, and including not less than one year's work.

Courses 2 and 3. Method in the Geometry of Euclid (12 weeks each).

These courses cover the ordinary high school work in plane, solid, and spherical geometry. Special attention is paid to the mechanism of deductive reasoning, the earlier demonstrations being developed in complete syllogisms. Review exercises include classification of the established truths, and schemes for tracing proofs to the original definitions and axioms upon which they rest. About one-third of the time is devoted to original demonstrations. Two main ends are kept in view: to equip the student with the forms of deductive reasoning, and to make the study a drill in precise thinking and accurate, perspicuous expression.

Courses 2 and 3 are required of all students that have not had previously strong courses in geometry. Either course may be taken instead of Course 1 by students preparing for high school teaching.

METHOD IN ASTRONOMY (Elective).

Course in Young's Elementary Astronomy (12 weeks).

This course is intended to give students such an insight into organization of the Solar System and the problems of Astronomy as will enable them to read an almanac, and teach mathematical geography intelligently. As far as possible numerical facts are derived mathematically from the original data.

This course is given in the Fall Term, provided it is elected by at least ten students. Prerequisite: Plane Geometry.

METHOD IN PHYSICAL SCIENCE.

*Course 1. Method in Physical Science for the Grades with Course of Study for the same and Observation in the Practice School. (Fall and Spring Terms).

This course is to be taken by all candidates for graduation—other than those who take Courses 6, 4 and 5, and 2 in sequence*—unless excused through the election of elective courses. It is the only course required of students from accredited high schools giving the prerequisite training in Physics and Chemistry. It contemplates the attainment of the following ends:

^{*}See note under Course 6.

- a. The discovery of an acceptable pedagogical basis for the study of the Physical Sciences in the grades.
- b. The laying out of a Course of Study in Physical Science, involving Physics, Chemistry, Astronomy, Meteorology, etc., supposed to be in harmony with the pedagogical principles above.
- c. A review of the principles and laws of Physical Science which such a course involves.
- d. Frequent observation of the work in the Practice School.

Prerequisites: A practical, first-hand knowledge of Elementary Physics and Elementary Chemistry, such as is obtained in our best high schools.

Course 2. Elementary Chemistry. (3 hours per week, recitation, 4 hours per week, laboratory work; counting as 5 hours). (Winter Term).

This is a brief course in Chemistry for those students who have not the prerequisite preparation for Course 1. It is a rather intensive study of the underlying principles of the science. An effort is made to consider those laws, theories and processes which are essential to the science. The student is led to a familiarity with the general aspect of the science through a study of a few of the more common elements and compounds only. All theories are stated quantitatively and nearly all laboratory exercises are quantative in nature. The Atomic Theory is studied only after the facts of chemical combination are well understood. Chemical equations are given only the relative importance due them. Special attention is given the consideration of changes in energy, while the facts brought to light by the recent advances in Physical Chemistry receive due attention.

Prerequisites: A practical, first-hand knowledge of Elementary Physics, such as is obtained through a thorough high school course by laboratory methods.

Course 3. Elementary Physics, Review Course. (3 hours per week, recitation, 4 hours per week, laboratory work; counting as 5 hours). (Fall Term).

This is a course given for the benefit of students who have had a partial high school course in Physics, but who have had poor opportunity for laboratory practice.

Prerequisites: Algebra and Geometry, and a fair text-book knowledge of Physics, about the equivalent of a first-grade certificate requirement.

Courses 4 and 5. Elementary Physics. 43 hours per week, recitation, 4 hours per week, laboratory work; counting as 5 hours). (Spring and Fall Terms).

This is really a two-term course in Physics given for the benefit of students who have had no previous training in Physics as a science. The work of Course 4 includes:

- a. Theory, covering: Division, properties, and conditions of matter; motions, force, work, and energy; gravitation; uniform and accelerated velocities; pendulum; simple machines; mechanics of solids, liquids and gases; sound.
- b. Laboratory work, covering: Careful measurements of lengths, areas, volumes and masses; problems in cohesion and in the mechanics of solid liquids and gases; study of simple machines; problems in sound.

The work of Course 5 includes:

- a. Theory, covering: Heat and light; magnetism; static and current electricity.
- b. Laboratory work, covering the same topics as the theory. (All laboratory work is quantitative in nature).

Prerequisites: Algebra and Geometry.

Course 6. General Physical Science. (Winter Term).

The object of this course is to afford the student an opportunity for making up deficiencies in general knowledge concerning natural phenomena occasioned by lack of training in Nature Study in the grades. All students who have had neither special advantages for Nature Study in the grades nor High School Physical Science will be expected to take this course as a prerequisite to all other courses in this department.

The course will cover in a simple way: Some phases of Elementary Meteorology, together with daily weather observations, both non-instrumental and instrumental; the physical principles involved in the use of the instruments; an elementary knowledge of the solar system with observations of planetary movements, and the movements and resulting phases of the moon; a study of a few of the principal constellations, especially those lying along the zodiac; the use of the almanac; combustion and oxidation; etc., etc. In general, the work will be determined by the phenomena which confront the student daily.

NOTE:—Students taking Courses 6, 4 and 5, and 2 in sequence may substitute them for Course 1 and its prerequisites.

ELECTIVE COURSES.

Course 7. Elementary Meteorology. (Spring Term).

The object of the work in a general way, is three-fold: First, to furnish that training which will equip the Normal School student to teach intelligently weather observations and the simpler elements of Meteorology in the grades; second, to equip the teacher for the guiding of more advanced study of Meteorology in the later years of the High School; third, so to prepare the teacher that he may be a potent factor in the dissemination of knowledge of, and interest in, the study of weather phenomena in the community in which he is to work. The course receives its justification from the rapidly increasing interest (dating largely from the report of the Committee of Ten) in Elementary Meteorology as a study suited to Intermediate and Grammar grades, as well as to the High School, and from the efforts made by the government to interest the common people in the work of the Weather Bureau.

The laws and theories of meteorological phenomena are developed to a great extent by laboratory methods. Every proposed explanation of observed or recorded facts is challenged until clearly shown to be based upon accepted physical laws, such as govern gases and vapors, heat and light. Besides making a careful examination of the government's daily and monthly weather reports, the student keeps a daily weather record, and later makes his own forecast. The Physical Laboratory is an authorized and well-equipped Government Display Station.

Prerequisites: Same as for Course 1.

Course 8. Method of Physics for the High School with Course of Study for the same, together with designing, setting-up and testing of suitable apparatus, and physical manipulation in general. (This is a two-term course given two credits; 10 hours of laboratory work per week, counting as 5 hours. (Spring and Fall Terms).

The course contemplates the attainment of the following ends:

- a. The discovery of an acceptable pedagogical basis for a study of the Physical Sciences in the High School.
- b. The observation of the development of a course of study, Courses 4 and 5, supposed to be in harmony with the pedagogical principles considered above.
- c. The acquisition of considerable skill in physical manipulation.

 Prerequisites: Same as for Course 1.

Course 9. Method of Chemistry for the High School with Course of Study for the same, together with the designing, setting-up and testing of apparatus, and physical manipulation in general. (10 hours per week of laboratory work, counting as 5 hours). (Winter Term).

The general intent and scope of this work is entirely comparable to that of Course 8. It is a close study of Course 2.

Prerequisites: Same as for Course 1.

N. B.—Courses 7, 8, and 9 are elective courses. Students contemplating taking any of these courses should arrange for making the necessary substitutions as early as possible in their course.

METHOD IN BIOLOGICAL SCIENCE.

Course 1. Method in Biological Science (1 credit). One term.

Review of the field of Biology from the teacher's point of view, with a discussion of a course of Nature Study in the grades.

Prerequisites: One-half year in Zoology and one-half year in Botany with a practical study of a series of typical plants and animals. Such work is presupposed in graduates of a high school with a good four-year course.

Course 2. Method in Physiology (One credit). One term.

Review of the subject matter for the purpose of establishing a sound pedagogical basis, and formulating a rational method and order of procedure in teaching Physiology and Hygiene in the grades.

Prerequisites: One term's study of Physiology, with practical work in dissection and experiment illustrating physiological processes. A knowledge of elementary physics, embracing levers, air and liquid pressure, the working of common pump, air pump, and force pump; wave motion; an elementary knowledge of the chemistry of combustion.

Course 3. Botany. One term.

Practical study of a series of plants typical of the main groups, including work in structure and function.

Prerequisites: Elementary Nature Study. (Course 6).

Course 4. Zoology. One term,

Practical work on a series of typical animals, paying especial attention to habits and life histories.

Prerequisites: Elementary Nature Study.

Course 5. Physiology. One term.

Practical work in experiment and dissection with observation in the grades.

Prerequisites: (Course 4). Elementary knowledge of levers, air and liquid pressure, including the common pump, air pump and force pump; wave motion; an elementary knowledge of the force of combustion.

Course 6. Nature Study in the Living World. One term or two terms, according to proficiency.

Students who have had a fair amount of work in Science, as in the smaller high schools, or schools with a shorter course, will be permitted to begin with Course 3, taking in sequence Courses 4 and 5. (In some cases students may begin with Course 4, taking after it Courses 5 and 3).

In Courses 3 to 6 the work is rather more academic in character, but at no step is the fact overlooked that preparation for teaching is the main object. Courses 3, 4 and 5, or Courses 3, 4, 5 and 6, count as two credits, equivalent to Courses 1 and 2.

SPECIAL AND ADVANCED COURSES.

For those preparing to teach Biological Science in High Schools the following courses are offered:

Course 7. High School Zoology (one credit). One term, 5 hours a week.

Advanced study and dissection; making collections; taxidermy; reading larger works; preparation of material and assistance in regular Normal school classes; teaching high school classes in Zoology in the Practice school.

- Course 8. High School Physiology (one credit). One term (5 hours a week). General plan the same as in zoology.
- Course 9. High School Botany (one credit). One term (5 hours a week).

 The plan is essentially the same as for zoology and physiology.
- Course 10. Special Nature Study (one credit). One term (5 hours a week).

Continued Nature Study. Familiarity with the changes from season to season. Familiarity with the leading works on Nature Study. Observation and practice in the Training School. A theme on some special phase of the subject of Nature Study, embodying contributions of original plans and ideas as to teaching the subject.

These four extra credits may be substituted for credits in other departments.

METHOD IN PSYCHOLOGY.

FOURTH TERM IN COURSE.

- Stages in the life development of the individual; Infancy, Childhood, Adolescence, Adulthood.
 - a. Conditions and characteristics of each stage; Physical, Mental, Social.
 - b. Each stage interpreted in its relation to genetic growth.
 - c. Conditions and causes making for normal and abnormal development, respectively, in the first three stages.
- The physical organism through which the human mind acts. This course presupposes a good knowledge of physiology, especially of the nervous system.
 - a. Structure, function, and adaptation of parts.
 - b. Detection of abnormalities and their relation to development.
- 3. Detailed study of processes and laws of mental development.
 - a. Sense perception, Memory, Imagination, Conception, Judgment, and the higher stages of thinking.
 - b. The place of emotional life in development: In the intellectual, the social, the ethical and religious, the æsthetic.
 - c. Motor tendencies and growth of will.
 - (4) The following great general notions of psychology are studied (in their proper connection) in their relation to mental development: Attention, Imitation, Suggestion, Apperception, Interest, Association of Ideas, Habit, Language.
- 4. Methods of studying Psychology. Its scope. Its place among the sciences. The strong claim of certain phases of the subject to a place in the secondary course of study.

METHOD IN SOCIAL AND ECONOMIC SCIENCE.

For the present no prerequisites of academic knowledge will be made.

The Course will include:

I. Theory of Economic Forces. The general movement during the term's work will be that determined by a deductive treatment of the science. But each main tenet of economic theory will be developed in the class-room before the authorities are read; and its discussion will be accompanied by the observation, collection, classification of industrial facts and the reading of pertinent industrial history. See below 2 and 3.

- 2. Society as a Product of Economic Forces. Observation of industrial phenomena within reach; cumulative experience of the class; our industries—extractive, transforming, transferring, transporting, service, collection of data for cities, counties, states, the nation, for other nations; localization of industries; economics and geography. Study of the social condition of the several economic classes. Discussion of the various social and economic questions that the data collected suggest; economics and morality.
- 3. Economic Forces in History. Industrial History of England and of the United States, as supplementary reading. The knowledge whence we came as a help in determining whither we are going. How economic forces have made a political history.
- 4. Method in Economic and Social Science for the Public School. Discussion of the method for the high school. What may be done in the grades. Outlines of matter to be used in the grades in connection with history, geography, general exercises, calculated (1) to increase the pupil's society knowledge and (2) to make him locate himself in the social order, feel the responsibilities of his position, and form correct social habits.

METHOD IN GEOGRAPHY.

Nature, content, and purpose; subject to the laws and methods that govern good teaching in other natural sciences; the material, as far as possible, obtained from nature; abundance of material in the vicinity of every school house; the material well adapted to the growing mind; the study of the home neighborhood, the key to the study of the world: without this key no one can enter and possess; with it the gates are made to swing open. revealing the treasures that lie beyond; correspondence of the sequence of topics to the law of mental development. Geography furnishes material suitable for the training and strengthening of sense perception, memory, imagination and the reflective powers; most rational way of using geographical material for the purpose of mind growth. This leads to the construction of a logical course of study for the different grades; geographical sketch: relation of geology to agriculture, history, manufactures, etc.; deals with the land, water and atmosphere, with their action and reaction upon each other; what this action and reaction have done to fit the earth for the abode of man and the theatre of his activities; how these activities have been quickened and enlarged by geographical environment; environment valuable only as it tends to promote a higher and richer life, both material and spiritual. Influence of contour upon civilization; of relief; of relative position; this influence revealed by location of great industrial centers. Action and reaction of the Old World and the New upon each other; influence seen in a higher civilization for each; educational value of geography as revealed in history; man's progress, as influenced by environment, from his departure from the cradle of the race until he reaches the great work-shop of the nations; a principle of growth seen through it all; law of life and growth applicable to all that undergoes the process of development. As the local geography reveals the social life of the local community, so does the study of geography the larger geographical unit reveal the larger social life; each continent fitted by its position and form for the education of man at some particular stage of his development; the entire earth made for human society as the body is made for the soul; the geographical march of history.

METHOD IN UNITED STATES HISTORY.

Content, purpose, educational value, method. History in general is the workings of man's intellect, feelings and will, as they reveal themselves in objective facts. It is knowledge of the play and activity of man's spiritual nature, hence it is moral knowledge; conveys to man the past experiences of the race; influenced by geography. United States History reveals the thoughts and motives that actuated the men who made the history of the nation; connection with English and other European history; reveals the social, economic, and political conditions that prevailed at different periods; also reveals the growth of the national spirit; shows how the different parts of the country were drawn together and united into one; effects of the union; growth and development of various industries, with the uplifting of industrial life; great inventions and the influence upon social and spiritual life; influence of war upon social, economic, moral and intellectual life; comparison of the wars from this point of view; sources of revenue; biographical sketches of the men prominent in the upbuilding of the nation and in shaping its destiny; rise of the political parties; questions at issue.

METHOD IN CIVIL GOVERNMENT.

Man, a social being; society the natural state in which to live, hence the necessity of government; right of society to govern its individual members; the object. Powers and duties of the state; rights and duties of the individual; relation of government to social progress; theories of the state; its evolution. Historical sketch of the rise and development of government; charters; constitutions; relation of American government to that of England; the relation traced in history. Character of colonial governments in America; steps leading to formation of the Constitution; comparision with Articles of Confederation; Adoption of the Constitution; effect on national life; machinery of the government; power and duties of the different

branches; duties of the different department relation of the national government to the States; rights of the citizens protected; necessity of amendments.

Historical sketch of Illinois; Ordinance of 1787 and its influence on the history of the State; government as a territory; admission into the Union; government as a State; three constitutions; study of the constitution of 1870; bill of rights; branches of the government; power and duties of each; duties of different departments; comparison of State government with that of the nation; government of the different practical divisions of the State; State boards; State institutions; how supported; source of revenue; taxation.

ANCIENT HISTORY.

The ancient oriental nations; civilization of each; the vital principle; contribution of each to human progress; preservation of that which was worthy. Geography of Greece; influence of geography upon its civilization; Greek colonies; mythology. Rise and growth of Sparta; its government; central thought of the government; education; position among the states of Greece; attitude toward Athens; what it accomplished. Rise and growth of Athens; government; comparison with that of Sparta; education; culture; different forms of literature; philosophy; sculpture; patriotism; war with Persia; cause; results; influence upon the world's history; great men; the Macedonian period; our indebtedness to Greece. Geography of Italy; ancient inhabitants; founding of Rome; its religion; government at different periods; struggle of the Patricians and Plebs.; victory of the Plebs.; effect of the victory on social life; conquests; effect of conquests on social, economic, and political life; education; Greek influence; cause of the decay of Rome; the Roman, the lawgiver of the world; great men; the triumvirates; founding of the empire; influence of Rome upon modern history.

Construction of course of historic study through the grades and the high school.

MEDIÆVAL HISTORY.

Movements of the Teutonic tribes. ,Conflict of the region north of the Alps with region south; physical conquest of the south by the north; spiritual conquest of the north by the south. Monasticism; advantages; disadvantages. Romance nations and languages; comparison of Romance nations with Teutonic nations. Mohammed and the Saracens; conquests, east, west, and north; effect on civilization. The Northmen, in their old home, in France, in England, etc. Rise and growth of the Papal power; its influence; conflict between Pope and Emperor. Feudalism; chivalry; the crusades; effect on civilization of Europe. Rise and growth of the Ottoman

Empire; downfall of Constantinople; influence of fall; the revival of learning. Growth of cities; conflict between cities and nobility. Printing. Luther and the German reformation; Loyola and the Jesuits.

The Celts in Britain; the Romans; the Saxons; rivalry between the Celtic and the Roman church; the Heptarchy; the Danes; Alfred the Great; Dunstan; Edward the Confessor; the Norman conquests; influence of the conquest upon the history of England; conflict of kings and the church; Thomas a Becket; conquest of Ireland; Magna Charta; first parliament; wars with the French; wars with Scotland; War of the Roses; the Tudors; Henry VIII and the Reformation; Mary I; Elizabeth; literature of the period; the Spanish Armada. The Stuarts, James I; and the colonization of America; trouble with the Puritans; war between Charles I and parliament; Cromwell; the restoration; the revolution of 1689; cause; result; effect upon American colonies.

PHYSICAL CULTURE.

The Physical Culture Course is to prepare teachers of public schools to promote the highest physical welfare of their pupils. The work is:

- 1. To discover by a study of the human body what principles of exercise must be used to secure the completest use of the body.
 - 2. To find exercises which act in harmony with these principles.
- 3. To make an organic arrangement of these exercises into a graded system.

During this prosecution the subjects of Health, Beauty of Form and of Movement, Physical Expression, and Character, will be considered in their relation to physical exercise. The philosophy of Physical Expression will include a study of gesture and its genesis, leading to the idea that genuine expression is a gleaming forth of the inner life.

Prerequisites to this course are.

- I. Physical erectness and freedom.
- 2. Ease and smoothness in walking.
- 3. General culture expressed through the body.

Practical courses are provided for those who cannot meet these requirements. The student of the average physical condition of those who need but one year of preparation for the Normal Course, will take one course of preparatory gymnastics. The student of the average physical condition of those who take about two years to prepare for the Normal Course, will take two preparatory courses in gymnastics.

A special suit is necessary. It can be made after arrival. Cost of suit, from \$3.00 to \$6.00.

Twenty-four period, of class-work constitute a course in Physical Culture. The Gymnastic classes in the Practice School are conducted by pupil teachers, and the work supervised by the teacher of Physical Culture.

ATHLETICS.

Athletic sports are encouraged, as a means to pleasant recreation, for their value in developing the body, as a source of social and ethical culture, and as cultivating the spirit of cooperative enterprise; also, as furnishing pleasurable interests which will keep the students from seeking questionable entertainment.

Basket Ball, Tennis, Base Ball, and LaCrosse are the games most in use. There are two fields for basket ball, one in the Gymnasium and one on the campus. There are numerous good tennis courts on the campus and one in the Gymnasium. For the other games there is abundant room and ample provision. An excellent Bowling Alley is on the road to completion. And a box court for Hand Ball is to be added soon to the provisions for wholesome recreation. These games are managed so that a large number may engage in them. Opportunity is given to several students to acquire skill in conducting games.

ORAL EXPRESSION. (

Course 1. (6 weeks: required of all students).

- a. Physiology of Articulation. (1) Formation of the English sounds.
 (2) The relation of form to tone quality, and of articulation to expression.
- Method in Oral Expression. (1) The psychological steps in the development of expression. (2) Discussions of the criterious of expression.
- c. Extemporaneous speaking and story telling. (1) Drill in the ready use of good language, and in holding attention. (2) Personal criticisms upon thought, bearing, manner and voice.
- d. Discussion of the value of expression to the teacher. (1) In instruction. (2) In discipline. (3) In Child Study.

Prerequisites:

1. The ability to interpret and appreciate good literature. 2. A clear articulation. If there is any condition of voice or physique which would prevent success in the work of the term, this condition must be corrected before admission to the class can be granted.

Students who may need it will be required to precede Course 1 with one or both of the courses given below; if but one, it will be Course 3.

Course 2.

- a. Thought Reproduction for Criticism. (1) In original words. (2) In the author's words.
- b. Phonic drills for clearing and strengthening the articulation.
- c. Tone placing.

Course 3.

- a. Oral Interpretation. (1) Vividness of conception. (2) Beauty, truth, and power in expression. (3) Reading by individuals, from a text not in use in the class, as a test of the ability to impart thought.
- b. Sound analysis of words.
- c. Voice culture adapted to the speaking voice.
- d. Interpretation of tone quality; its relation to physique, character, and mood.

Students who wish to make a specialty of the work in oral expression will spend much more time upon the work outlined than is allowed in the general course; to such students additional work will be given in the following: I. Interpretation of gesture. 2. History of oratory. 3. Preparation and classification of selections for oral interpretation. 4. Arrangement of programs.

METHOD IN GRAPHIC ART.

Course 1. (12 weeks).

History of Art. Picture Composition. Illustrative sketching.

Students taking this course should be able to draw freely in Perspective, Light and Shade and Color. School principals should see that students wishing to enter this work do thorough work in the high schools.

Course 2 (24 weeks).

FIRST TERM—Drawing from common objects, fruit, vegetables.

SECOND TERM-Free hand perspective, light and shade; color.

THIRD TERM—History of Art; picture composition; illustrative sketching.

It is hardly necessary to say that this course is planned for teachers, that teachers may draw freely. It is hoped, however, that students may learn to seek the culture that is derived from the beautiful in Nature and Art.

METHOD IN PENMANSHIP.

Course 1. Method of Penmanship in the Grades (3 weeks).

Penmanship is considered only a means to an end. The aim of this course is to determine from the standpoint of the teacher what written forms can be most easily read and the means by which they can most easily and rapidly be produced. Economy of effort is the basis for determining all the details of form, position, movement and aims of practice.

This course is required of all students. It includes merely the pedagogy of the subject, but all pupils who cannot do legible writing with ease and a fair degree of speed should, in addition to Course 1, take in the High School,

Course 2. Practice in the theory and art of penmanship. (6 weeks, or longer if necessary).

METHOD IN WORD STUDY.

Course 1. Method of spelling and word analysis in the grades. (3 weeks).

This course is required of all students. It is the only course required of graduates of approved high schools, and, also, of other students who, upon examination, are found to have

- a. The ability to spell 90 out of 100 of familiar words, such as lose, led, busy, until, separate, occurred, reference, notable, noticeable, ridiculous, accommodate, recommend, and
- b. A knowledge of the literal meaning of 75 out of 100 of the most frequently recurring prefixes, suffixes, and roots which comprise our most familiar, derived words, such as proceed, recourse, educate, geography, bicycle, verdict, bisection, corpulent, thermometer, sympathy.

Students who have not the prerequisite preparation for Course I should take in the High School

Course 2,—Drill in spelling and word analysis. (3 weeks, or as much longer as may be necessary to attain the standard set for Course 1.

METHOD IN GRAMMAR.

- 1. Purpose of Work.—To give a teaching knowledge of grammar; (1) a knowledge of the body of facts constituting the science of grammar, in their organic relations, and (2) a knowledge of the process by which the mind must acquire grammatical facts,—of the method of acquisition appropriate to a science and to child-mind.
 - 2. Plan. (a) The organizing principle of grammar discovered and stated.
 - (b) This principle shown to give rise to the science of grammar.

Relation of thought to language. Nature of a thought and of a sentence. Different forms of thoughts and the corresponding forms of sentences. Classification of sentences on the basis of the relation of the speaker to the listener. Simple, complex, and compound ideas, necessitating words and phrases. The clause and the thought form that gives rise to it. Principal and subordinate ideas in the thought, and the modified and modifying elements in the sentence. Objects, attributes and relations, ideas of them, and the language form expressing these ideas. The parts of speech, their nature, functions, and resemblance. A logical basis of definition sought, and all definitions tested by it. Much study of concrete methods of presenting the facts arrived at, to children in the grades. The relations of grammar to other subjects of study, and to life.

- 3. *Time*. For Section F, one term; for other students, two or three terms, according to the previous preparation of the students.
- 4. Special Courses. For students who wish to specialize in English, additional courses will be arranged.

LITERATURE AND RHETORIC.

The Theory of Discourse is studied in its relation (1) to Composition; (2) to Elementary Reading; and (3) to the Interpretation and Appreciation of Literature. This involves a consideration of the principles that should inform and control instruction in reading, composition, and literature from the beginning to the end of the school course.

The principles developed in the course just described receive further development and practical application in a course in Literary Interpretation. This course is based as far as possible on masterpieces with which the members of the class became familiar in their high school work before entering this school. Especial attention is given to the handling of poetry and the drama.

To pursue either of these courses with profit, students should bring to the work minds already intelligently interested in the subject matter. To this end they should have had practice in composition either daily for one year or once or twice a week throughout their high school course. In connection with this they should have received elementary instructions in the principles of rhetoric. And, furthermore, they should have had two or three years' work in literature proper, *i. e.*, in the study of complete masterpieces in prose and poetry.

Students with less preparation than that just outlined are admitted to the school, but before they can be admitted to the Courses in Theory of Discourse and Literature Interpretation, they will be required to take such courses as may be needed to supply what they lack. For this purpose we offer three terms in composition and three in literature. The former include constant practice in theme writing, together with instruction in the elements of rhetoric. The latter include the study of lyric poetry, minor forms of lyric poetry as well as the great epic, the drama, essays or speeches, and the novel. The masterpieces studied will be chosen from the works of Shakespeare, Milton, Wordsworth, Tennyson, Matthew Arnold, Longfellow, Whittier, Burke, Webster, Emerson, Carlyle, Scott, George Eliot, Thackeray, and Hawthorne.

Students who wish to prepare themselves more especially to teach literature in the common schools and high schools will be given an opportunity to substitute additional courses in literature to the extent of three credits, to take the place of one credit in mathematics, one in science, and one in history or geography or political science. These courses will change somewhat from year to year. They are intended to give our students a wider knowledge of the Shakespearean drama; of the dramatic monologue as developed by Browning; of the novel in the hands of the greatest novelists, and its place in life and education; of lyric and narrative poetry in Chaucer, Spenser, Wordsworth, Tennyson, and some of the minor poets; and of speeches and argumentation.

METHOD IN LATIN.

Six credits are required for the completion of the course, one from each of the following:

Course 1. Method in Beginning (First Year). Latin (60 hours).

Prerequisites: An academic acknowledge of the usual first year's work. A re-examination of Latin grammar, the search being in the main one for unity and harmony. Comparative view of the declensions and conjugations and correlation of phonetic changes involved with phenomena that the pupil is acquainted with. Physiological explanation of phonetic changes. Introductory study of syntax or of how Latin expresses the main types of relations. The question will be asked at every step: What is the English (or the German, etc.) way of expressing the same relation? Roman pronunciation with special care for the long yowels. Lineal relationship of Latin and English, how and when Latin derivaties came. Illustrations of each class, development of a dozen important roots in English. Cognate relationship of Latin and English, many illustrations, statement of Grimm's law.

Note: For accommodation of pupils who have not had the usual academic training in first year's Latin, Course I will be given, along with the academic work required, in a course that will take twenty-four weeks for its completion.

Course 2. Method in Second Year Latin (60 hours).

Prerequisites: Two years' academic work and Course 1 above.

Enough translating will be done to insure that the pupils have acquired the habit of using only good, clear English that employs the usual English methods of expressing the relations expressed in the Latin original. This is our definition of a literal translation.

Inductive study of the Latin method of expressing those relations that usually offer to beginners the most difficulty, collection of all the illustrations in Cæsar, examination of different authorities, etc.: thus cum-clauses, gerund and gerundive, uses of dative, etc., will be studied. Further study of the lineal relationship of Latin and English. General changes that derivatives of the first, the second, the third and the fourth period have undergone. The cognate relationship; mastery of the consonant correspondences with illustrations.

Note: For the accomodation of pupils who have not had the prerequisite academic work necessary for Course 2, the course will be given in a class that will take the academic work along with the above, and take one school year for the work.

Course 3. Method in Cicero (60 hours).

Prerequisite: Courses I and 2 and an academic course of two weeks in some secondary school.

Alternate days the class will recite with a class that is going over the work for the first time, both review and advance being required of all the pupils alike. It will be insisted upon that the translation be worthy of the original Latin. Analysis of the orations from oratorical and rhetorical standpoint. Written re-review of one, for the sake of getting exceptionally good English. It is the aim to spend most of the recitation time in this course upon matters pertaining to rhetoric and literature. We depend largely upon this course to form good literary taste and literary appreciation in the mind of the pupil.

Note: For the accommodation of pupils who have not had the prerequisite academic training, this course will also be offered to pupils with a class that is going over the ground for the first time, and will take twenty-four weeks for its completion.

Course 4. The Method in Vergil and Ovid. (12 weeks).

Prerequisite: Courses 1, 2, and 3.

Considerable reading will be done, study of the scansion (the purely quantitative method). Study of the authors from the literary standpoint.

Note: Also offered in a class that takes one year for the work.

Course 5. Advanced Reading (Livy). (12 weeks).

Prerequisite: Courses I-5, above.

Comparative syntax of Livy and Cæsar. Lineal and cognate relationship of Latin and English. Vowel and consonant changes of words of the third period. All the important classes of derived words treated. Cognate correspondence of Latin and English vowels.

Course 6. Advanced Reading. Horace Odes, etc. (12 weeks).

Prerequisite: Courses 1-5, above.

Literary interpretation of authors read. Application of the student's knowledge of the comparative phonology of Latin and English and German in a dozen practical fields, as in the reconciliation of Latin and English and German numeral systems, declensions, etc. History from cognates. Discussion of secondary school problems that pertain to Latin.

WHAT LATIN MAY BE SUBSTITUTED FOR.

Graduates of approved high schools, if they have had three or four years' Latin, may take the six courses in method and substitute for six credits of their regular course as it may be directed.

Graduates of the smaller high schools, expecting to take about nine terms for the completion of their work here, may, if they have had as much as two years' Latin, complete our Latin Course in nine terms and omit nine studies in their regular course, as follows: Reading and gymnastics, one term; geography, one-half term; words and writing, one-half term; drawing and arithmetic, one term each; grammar, one-half term; the other four and one-half terms' work to be determined with reference to the past course, the record and the aim of each individual student. Pupils of this class who have had no Latin may complete three years of our Latin work, omit the first four and one-half studies mentioned first above, and one and one-half studies to be determined later.

Pupils who come to us with no high school training and no Latin, may, if they take Latin, omit some one study each term during the eleven or the twelve terms of their course. The omissions for the first year shall be: composition, one term's arithmetic, words and writing. What the latter omissions shall be, will be determined when the proper time comes.

LATIN, GERMAN AND GREEK.

It is suggested that it will be best for many students to add a little to the length of their courses to get Greek, Latin, and German. Thus, a student who might naturally expect to finish his course in three years, could take twelve terms of Latin and six of German, omit only six other studies for one term each, and still finish his work in four years.

Under proper circumstances pupils may be allowed to substitute German for some of the Latin arranged for above.

GERMAN COURSES.

Course 1. Method in First Year German.

Prerequisite: One year's High School work or an equivalent in familiarity with the language.

The course will include a review of German grammar, the search being in the main one for unity and harmony; some correlation of English and German as cognate tongues; some practice in composition; and in conversation; sight reading; translation by ear; discussion of method in first year work. Schiller's "Die Glocks." Some one classic, such as "Wilhelm Tell," will be read and its treatment will be intended as an embodiment of our ideas as to method. (12 weeks). Spring term.

Note: To enable pupils who have had no German before coming to us, to meet the prerequisite above, we shall offer a course for beginners, extending through the fall and the winter term of each year. The work will cover 100 pages of Boisen's German Prose with grammar to match: "Minnie von Barnhelm" and some translation by ear and sight.

Course 2. Method in Second Year German.

Prerequisite: Course I above and satisfactory evidence of ability to do the work.

Goethe's "Egmont" and Freytag's "Aus dem Staat Friederick's des Grossen," analyzed as literary productions. Cognate relationship of German and English. Discussion of questions of method. The class will be conducted for the most part in German. (12 weeks, each spring term).

Note: To help students to meet the prerequisite above, a course, open to those who have completed Course I, will be offered, running through the fall and winter term of each year. Much of the time will be spent in conversational drill. Two or three classics will be read.

GREEK.

Those who desire Greek take it in the High School department of the Practice School.

MUSIC.

Practice and sight singing in ten keys. Two, three, four, and six part measures. Chronomatic, minor scales in four forms, two, three, and four part singing.

THE SCIENCE AND ART OF INSTRUCTION.

FIRST TERM.

- 1. The Psychology of the Teaching Process:
 - a. The value of the process and organic elements deduced and variously illustrated in the teaching of subjects.
 - b. The science and the art of the recitation deduced from the foregoing, including the principles of school management in general.
- 2. Practice Teaching. (Third, Fifth and Sixth Terms).

The Practice School is composed of four departments as follows: (1) Primary; (2) Intermediate; (3) Grammar; (4) High School. The object is to give careful and liberal training in the art of teaching in these grades and also to show a concrete realization of the theories and principles taught in the other departments of the Normal School. Especial attention is paid to the psychology of the learning process and to the proper selection and organization of the subject matter.

Each student is required to teach three terms in the Practice School. A term's work consists in the daily instruction of a class for one recitation period during one full term. In general, students are given an opportunity to practice in three of the different departments. Students desiring to fit themselves for special work in one of the four departments or in any special branch of study are given an opportunity to do so, as far as is practicable and advisable. Teachers that have had satisfactory training and experience and wish to prepare themselves for expert work as critic teachers, will be allowed all the advantages of the Practice School.

Each practice teacher is required to write out the plans for recitation one week in advance. These plans are carefully examined by the critic teacher and, when necessary, discussed with the practice teacher and revised. The instruction itself is also observed by the critic teacher, and helpful criticisms are given in private. Each practice teacher is held fully responsible for the control and management as well as for the instruction of the class. As much as is possible, during the last two terms of his instruction the practice teacher is given charge of a room; so he is supervising one class at the same time he is teaching another. He is expected to develop skill and power in the management of a school.

SYNOPSIS OF THE COURSE BY CLASSES.

The following shows, approximately, the relative movement of classes of different entering abilities through the Course. The entering classes, stated in the order of decreasing preparation, are designated F, G, H, I, J,

K, and L. The F class is composed of graduates from the best high schools having four-year courses, and are supposed to complete the work in six terms. The I class is composed of the graduates of the best three-year high school courses, and are supposed to complete the course in nine terms. The L class is composed of those admitted on examination and received by appointment, and may complete the course in twelve terms. The other classes are formed from those whose preparation falls between the foregoing. This makes an ascending order of classes from L to F, working, in general a term apart. Sections of the same class are designated by affixing an exponent to the letter indicating the class; as F1, F2, etc.

CLASS F.

This class completes the work, as already indicated, in the following order:

TERMS:

- I. The Teaching Process; Arithmetic I; Biology; Rhetoric.
- 2. General Method; Physiology; Grammar; Reading and Geography.
- 3. Teaching; Algebra; Geography; Physical and Vocal Expression.
- 4. Psychology; Physical Science 1; Social Science; Drawing.
- 5. Philosophy of Education; Teaching; Writing, Word Study and Geometry; Civics and History.
- 6. Philosophy of Education; Teaching; History; Literature.

CLASS G.

Class G is composed of those students who will have to spend seven terms in completing the foregoing course. As a rule they will be expected to spend a term and a half longer than the F's, in mathematics, a term in physical science, a term in drawing, and a half term in geography.

CLASS H.

Class H will have to spend eight terms to complete the course; devoting two extra terms to mathematics, one to biology, one to physical expression, one to rhetoric and literature, one to physical science, one-half term to geography, and a half term to word and sentence study.

CLASS I.

The time is increased as follows:

TERMS:

- 1. Arithmetic 2; Geography; Grammar; Reading and Gymnasium.
- The Teaching of Process; Arithmetic 1; Rhetoric, Geography and Words and Writing.

- 3. Algebra 2; U. S. History; Botany; Grammar, and Method in Reading.
- 4. General Method; Drawing; Zoology; Algebra 3.
- 5. Geometry; Physiology; Reading and Gymnastics; Teaching.
- 6. Psychology; Drawing; Civics; Geometry.
- 7. Economics; Physics 3; Literature; Teaching.
- 8. Philosophy of Education; Chemistry 2; Shakespeare; Physical Geography.
- Philosophy of Education; Physical Science 1; Aucient and Mediæval History; Teaching.

CLASS J.

This class will devote a term more than Class I to mathematics; one to biology; one-half to history; one-half to word and sentence study; and one to rhetoric and literature.

CLASS K.

This class will devote, above the time required for J, one term to mathematics; one to biology; one-half more to each, history and geography, and one to word and sentence study.

CLASS L.

The time is increased for this class as follows:

TERMS:

- 1. Composition; Nature Study; Geography; Inductive Geometry.
- 2. Reading and Gymnastics; Elementary Physical Science 6; Geography; Business Arithmetic and Book-keeping.
- Words and Writing; The Teaching Process; Grammar; Arithmetic method in first six grades.
- 4. U. S. History; Grammar; Zoology; Algebra.
- 5. Grammar and Method in Reading; Drawing; Physiology; Algebra.
- 6. Reading and Gymnastics, General Method; Botany; Algebra.
- 7. Reading and Gymnastics, Civics, Geometry; Teaching.
- 8. Rhetoric; Psychology; Drawing; Geometry.
- 9. Criticism; Physical Geography; Economics; Drawing.
- 10. Literature; Ancient History; Physics 4; Teaching.
- 11. Philosophy of Education; Mediæval History; Physics 5; Teaching.
- 12. Philosophy of Education; Shakespeare; U. S. History; Chemistry 2.

COURSES OF STUDY FOR THE PRACTICE SCHOOL.

In the following outlines for the work of the Practice School the work in Music and Gymnastics does not appear. Systematic exercises in both Singing and Physical Culture are introduced in all grades.

FIRST GRADE.

LITERATURE.

FIRST TERM-FALL.

Stories I to 7 in "Classic Stories for the Little Ones." Thanksgiving and Christmas stories.

SECOND TERM-WINTER.

Stories 8 to 15 in "Classic Stories for Little Ones." Stories of Lincoln, Washington, Longfellow, and Lowell.

THIRD TERM-SPRING.

"Seven Little Sisters." Stories of Froebel and stories in connection with Arbor Day, Fourth of July, and Memorial Day.

Children memorize many beautiful poems throughout the entire year.

NATURE STUDY.

FIRST TERM-FALL.

- 1. Life History of Dog, Cow, Sheep, Squirrel, Rabbit, Mouse, Rat.
- 2. Preparation of familiar trees with large buds, as walnut, hickory, buckeye, and poplar for winter rest, associated with gathering of autumn leaves.

SECOND TERM-WINTER.

1. Winter study of Austrian Pine as type of Evergreen Trees. 2. Scotch Pine, Hemlock, any Norway Spruce by comparison with Austrian Pine. 3. Horse, Cat, and Chicken, (type of birds). 4. Such common phenomena as freezing and thawing of water, and soil, etc.; how water puts out fire, etc.

THIRD TERM-SPRING.

1. Plant seeds of Lima Beans, Sweet Pea, and Nasturtium. Watch development throughout term.

- 2. Buds of Apple, Cherry, and Plum. This study is begun before the buds are swollen at all. The study of the cherry is continued until cherries are ripe, and the other fruits are watched throughout the term.
 - 3. Duck (type of water bird). Goose by comparison with the duck.

READING.

The children are introduced to Reading through games of which directions are given at the board in writing. The vocabulary which the child has used in his plays and games becomes his first reading vocabulary. Later the following books are used:

Cyr's Primer.
Stickney's Primer.
Cyr's First Reader.
Thompson's Fairy Tale and Fable.
Hodskin's Little People's Reader.
Baldwin's First Reader.
The Finch Primer.
The Beginner's Reader. Bass.

Phonics.—Sounds of the vowels and consonants in most common use in the readers, letters not marked. Children are taught to recognize new words as fast as possible by making use of their knowledge of the sound values of letters.

NUMBER.

There are no regular classes in number work. Incidentally to the other subjects, especially nature study, the children learn to count and to perform simple operations, basing their work upon the need of quantitatively measuring their experiences.

WRITING-WRITTEN LANGUAGE-SPELLING.

The writing begins with blackboard exercises. The children draw, with large, free movements, many objects (such as the cart wheel, bushel basket, etc.) in which they are interested and which supply plenty of opportunity for movement. This work in movement is then carried over into the large, free writing of the names of objects drawn. Later they write short sentences about the animals and plants studied. Needed capitalization and punctuation taught. First desk work as large as the desk will permit.

DRAWING.

Molding of simple objects studied in science, as eggs, nuts, fruits, animals, etc. Drawing of colored objects with crayons, such as buds, leaves,

etc. Painting of same in water colors. Paper cutting and pasting. Blackboard and pencil illustrations of stories in literature. Drawings of human form, a child posing as model.

The teacher's method leaves the child wholly free in his execution, merely directing his observation or arousing his imagination preliminary to the effort at expression.

SECOND GRADE.

LITERATURE.

FIRST TERM-FALL.

Robinson Crusoe, chapters 1–10; or Hiawatha, sections III, VI, VII, XVIII, XX.

SECOND TERM-WINTER.

Robinson Crusoe, chapters 11-20; or Hiawatha, sections X, XI, XIV, VIII.

THIRD TERM-SPRING.

Robinson Crusoe, chapters 21-29; or Hiawatha, sections V, XIII, XXI, XXII.

The chapters referred to above are to be found in "Robinson Crusoe for Boys and Girls."

NATURE STUDY.

FIRST TERM-FALL.

Continue and complete study of Apple and Plum begun in spring. The Grape, ripened fruit on vine.

Watermelon and Muskmelon from flower to fruit.

Cabbage butterfly.

Caterpillars frequenting any of the trees previously studied, or the grape, and their preparations for winter.

SECOND TERM-WINTER.

- 1. Snow Crystals.
- 2. Arrival of early spring birds—time noted.
- 3. Watch for any change in the buds of linden, larch, birch, and willow trees.
- 4. Use of clothing, rubbers, rubber coats. Why some things float on water.

THIRD TERM-SPRING.

Learn to recognize all the common trees.

Continuation of study of trees as in preceding term.

Learn names and habits of all the common birds, so far as this is possible.

Brown thrush and golden-winged woodpecker.

Seeds of melon, corn, and morning-glory sown. Watch development.

Grape—buds and blossoms and green fruit:

Violet. Lily.

Honey bee. Firefly. Fish.

READING FOR THE YEAR.

"Classic Stories for the Little Ones."

"Nature Stories for Young Readers," Vols. I and II.

Poems connected with Literature and Nature Study.

"Grimm's Fairy Tales," Vol. I, Wiltse.

"Pets and Companions," Stickney.

"Seed Babies," Morley.

Second Reader, Cyr.

Second Reader, Baldwin.

Continuation of work in Phonics as outlined for first year.

Number for the Year.

The work in number for the year is based upon actual measurements. The children are led to ideas of numbers and their relations by the measurement of things within their experience. Through this work of measurement the following number facts and processes are developed and fastened by drill:

- (a) The forty-five facts in addition.
- (b) Addition of single columns of figures by grasping the tens, sum not to exceed 20; thus, add 7, 4, 3, 2; the children see a ten in the seven and the three, which put with the four and two makes sixteen.
- (c) Addition of two-place numbers, sum of either column not to exceed nine.
- (d) Since 3+4=7, 13+4=17, and 23+4=27, etc. Similar additions carried to 100.
 - (e) Understanding of all two-place numbers as composed of tens and ones.
 - (f) Subtractions suggested by (a) and (c).
 - (g) Figures, Roman numerals, and names of numbers to 100.
 - (h) All tables of compound numbers in common use.
 - (i) Divisions, Multiplications, and Partitions, to 20.
 - (j) Multiplication table of 2s, 5s, 1os, and 11s.

Hall's Arithmetic Reader is used in review.

WRITTEN LANGUAGE—WRITING—SPELLING.

Stories based on Nature Study and Literature, the sentences being connected in thought.

Poems copied.

Short stories reproduced by children as tests.

In addition to the points insisted upon in the first year, the children learn to paragraph.

Blackboard and desk exercises for freedom of movement in writing.

Both writing and spelling are taught incidentally to the work in written language.

DRAWING.

The method of the first grade is continued with new and more difficult materials. The child is especially stimulated to reproduce animal and human forms in action. Stories are illustrated by paper cuttings.

THIRD GRADE.

LITERATURE.

FIRST TERM-FALL.

Hawthorne's Wonder Book.

SECOND TERM-WINTER.

Hawthorne's Tanglewood Tales.

THIRD TERM—SPRING.

Lamb's Adventure of Ulysses.

Church's Story of the Iliad.

Oral presentation. Use of good pictures. Develop a healthy imagination. Secure full and clear reproductions. Let the moral judgment of the children be developed by estimating the characters and their deeds. Develop outlines and let each child preserve them in his blank book.

NATURE STUDY.

FIRST TERM-FALL.

The corn plant; life history, parts, uses.

The grasshopper.

Dissemination of seeds. Cocklebur, milkweed, thistle, golden-rod, sunflower, sycamore, etc.

The bullfrog.

The crow.

Migration of birds. Time.

Heat. Production, effects upon vegetation. Frost. The thermometer. Boiler house, a study of our system of heating and ventilation.

SECOND TERM-WINTER.

Gray hare. Home, habits, enemies, manner of living.

Crystals. Snow, sugar, salt, alum, saltpetre.

The hard maple's preparation for spring. Sap in February. Vaporization, clouds, rain.

The stars and larger constellations; the moon and its changes.

Arrival of early spring birds. Bird calendar.

THIRD TERM-SPRING.

Changes in the buds of the soft maple, box elder, birch, and willows. Blossoms, seeds, leaves, seedlings.

Continue study of birds as above. Include nesting, rearing of young, food, songs, etc.

The robin. The woodpecker.

The honey bee.

The potato.

Excursions are to be taken with the children throughout the year as often as necessary and as the weather permits, in order that the work may be based on the pupils' personal experiences.

READING FOR THE YEAR.

Scudder's Fables and Folk Lore.

Mrs. McMurry's Robinson Crusoe.

Stickney's Æsop's Fables.

Stickney's Hans Andersen's Fairy Tales. First Series.

HOME GEOGRAPHY.

FIRST TERM—FALL.

Visit to cupola of Normal School. Home neighborhood, prairies, forests, city, village, roads, bridges, slopes, brook.

Farmer's fall work. Preparation for winter.

An October garden.

The Campus. Slopes and drainage. Sand modeling. Map drawn to a scale. Miller Park relief. Forest Trees.

SECOND TERM-WINTER.

Farmer's winter work. Feeding stock. Stockyards. Shipping.

The nursery. Grafting.

The carpenter shop. The wagon shop. Blacksmith shop.

Schoolroom drawn to a scale.

THIRD TERM-SPRING.

The nursery. Kind of trees, packing, shipping.

The garden in April, May, and June. Relation to hot-bed.

The greenhouse.

Farmer's spring work.

Court house, records, court rooms, trials, etc.

Local history and management of the town. Council, streets, police, etc.

Parks and monuments, with their history.

In the study of each of the phases of industrial home geography (black-smith, wagonmaker, nurseryman, farmer), especial attention is given to bringing out their relations to one another, looking ultimately towards notions of the division of labor, inter-independence of trades and industries. Notions of physical geography are drawn from excursions in the neighborhood. During the year the stories of the "Seven Little Sisters" are presented orally wherever they are best suited to the work in home geography, and as the first introduction to other countries.

NUMBER FOR THE YEAR.

As outlined in the course of study for the common schools of Illinois. Text book, the Werner Arithmetic, Book I.

LANGUAGE—SPELLING—WRITING.

Language, spelling, and writing are taught in connection with the other studies, especially geography, literature, and science. These furnish abundant, familiar, and interesting subject matter, and the motive for either oral or written expression. The aim is fluency, freedom, variety. Corrections spring wholly from the child's needs. Thirty or forty short compositions from each child during the year, written, corrected, and copied under the supervision of the teacher.

Special drill hours for writing are devoted to securing good movement and form. In other subjects requiring writing the child is expected to preserve, first of all, good position and movement. Form to be left to time.

DRAWING FOR THE YEAR.

Perspective of large, coarse, curved-edged objects. Work for freedom, and proportion.

Studies from nature in both fall and spring.

Studies from the subject matter of literature, geography, and science. Holiday illustrations.

Clay work in the fall and spring. Blackboard work.

The following list suggests the character of the studies:

Tub, drum, peck measure, bushel basket, kettle, keg, crock, bucket, coffee pot, flag, gun, hatchet, sword, cap, Christmas stocking, tree, common tools, sled, basket, gray hare, thermometer, oil can, water sprinkler, mittens, kite, small alarm clock, broom, brush, view of human form, branching of trees, leaves, flowers.

FOURTH GRADE.

HISTORY.

FIRST TERM-FALL.

McMurry's Pioneer History Stories. Oral presentation of the stories of Joliet and Marquette, Hennepin, LaSalle, The Sioux Massacre, George Rogers Clarke.

SECOND TERM-WINTER.

From the same source the stories of Boone, Robertson and Sevier, Lincoln, of Cincinnati and Marietta.

THIRD TERM-SPRING.

From the same source the stories of Lewis and Clark, Fremont, DeSoto. For the method see under Literature for Third Grade. See pages 46-47.

NATURE STUDY.

FIRST TERM-FALL.

Cabbage butterfly. Caterpillars.

Turtle.

Grape-the ripened fruit.

Wild grasses.

Preparation of animals and plants for winter.

Migration of birds. Time.

SECOND TERM-WINTER.

Winter study of evergreens on campus.

The sun—sunlight, sunglass, prism, colors, position of sun.
Sources of springs, rivers, wells. Porosity.

The pump. Construction.

THIRD TERM-SPRING.

Review third grade work on maple, box elder, birch.

Fertilization and the part insects play in the fertilization of plants.

Grape-buds and blossoms.

Germination. Bean, corn, buckeye, walnut, maple. Seeds watched. Crayfish.

Apple and plumb blossoms. Formation of fruit.

Robin, woodpecker, turtle dove.

READING FOR THE YEAR.

Hawthorne's Wonder Book and Tanglewood Tales. Eliot's six stories from the Arabian Nights. Francillon's Gods and Heroes.
Bryant's Translation of Ulysses Among the Phæacians. Kingsley's Water Babies.
Use of dictionary required.

GEOGRAPHY.

FIRST TERM-FALL.

The Illinois river; the prairies of Illinois; corn and live stock in Illinois; the coal mines of Illinois; a trip on the Upper Mississippi; pineries and lumbering in Minnesota; Minneapolis as a trade center; the great wheat region of the Northwest several great trade routes to Chicago.

SECOND TERM-WINTER.

Lake Superior. St. Mary's Canal and Falls. The iron mines of Michigan. (Blast furnace). Chicago as a trade center.

Tobacco raising in Kentucky. Tobacco region. The surface of Tenuessee.

The Lower Mississippi. Jetties.

THIRD TERM—SPRING.

Cotton raising in Mississippi (cotton belt). Springfield and State government. Sugar in Louisiana. Cattle ranch in Texas (great grazing region). Pike's Peak and vicinity. Irrigation and the Big Ditch at Denver. Yellowstone Park.

Oral presentation as described under Literature for third grade. See page 51. Free use of sand and chalk.

ARITHMETIC FOR THE YEAR.

As outlined in the Course of Study for the common schools of Illinois, The Werner Arithmetic Book, I.

LANGUAGE—SPELLING—WRITING.

Expansion of work for third grade. See third grade, p. 54.

DRAWING FOR THE YEAR.

Perspective of simple straight-edged objects.

Studies from nature.

Studies suggested by history, geography, science. Holiday illustrations. Clay work. Blackboard handling.

The following list is suggestive: Boxes, baskets, pans, telescope, satchel, sled, bench, table, coffee-mill, trunk, book shelves, wheelbarrow, tent, vegetables, sprays of leaves, entire plants (root, stem, leaves, etc.), flowers.

FIFTH GRADE.

HISTORY.

FIRST TERM-FALL.

Champlain, Hudson, John Smith, Sir Walter Raleigh.

SECOND TERM-WINTER.

Columbus, Maggellan, Cortez.

THIRD TERM-SPRING.

The Pilgrims; Washington to Braddock's Defeat; Fremont, trip across plains and mountains to California in 1849.

NATURE STUDY.

FIRST TERM-FALL.

Clain. Catfish.

Apple. Pluin.

Migration of birds. Time.

Steam engine.

SECOND TERM-WINTER.

Light and the eye. Eye of an ox. Human eye.

The moon and its phases. Tides.

The crust of the earth; geologic strata; pebbles; limestone; granite; marble; gravel bank; gorge; erosion; glaciers; volcanoes; fossils.

THIRD TERM-SPRING.

Milkweed butterfly.

Honey bee.

Review of work of fourth grade in germination and budding of trees. See page 57.

Hepatica and marsh marigold.

Blackbird. Bobwhite.

Movements of the earth about the sun.

READING FOR THE YEAR.

Hiawatha, Parts I and II. Memorize selections. Ruskin's King of the Golden River. Macaulay's Lays of Ancient Rome. Whittier's Barefoot Boy. Heroes of Asgard.

GEOGRAPHY.

FIRST TERM-FALL.

Hudson River; Mt. Washington (White mountains); Boston (history and commerce); a cotton mill at Lowell (Merrimac river); Ship building at Philadelphia (ship and navy yards).

SECOND TERM-WINTER.

Washington (national government); oyster fisheries of Chesapeake bay (comp. Long Island Sound); James river and surface features of Virginia; the pineries of Carolina; the orange groves of Florida (comp. California).

THIRD TERM-SPRING.

The Allegheny mountains as a whole; New York city as a trade center; a gold mine in California; the salmon fisheries of the Columbia; the St. Lawrence river; City of Mexico (plateau and climate); the Rocky Mountains as a whole; the river systems and slopes of North America.

ARITHMETIC FOR THE YEAR.

As outlined in the Course of Study for the common schools of Illinois. The Werner Arithmetic, Book II.

LANGUAGE—SPELLING—WRITING.

Continuation of work of Third and Fourth Grades. See Third Grade.

DRAWING FOR THE YEAR.

Perspective of both curved and straight-edged objects. (See Third and Fourth Grades). Development of exact work. Artistic handling. Much outdoor sketching. Development of first expression in light and shade.

SIXTH GRADE.

HISTORY.

FIRST TERM FALL.

Colonial History—Massachusetts and Virginia. Review biographies of Miles Standish and John Smith.

SECOND TERM-WINTER.

New York, Pennsylvania and Maryland. Biographies of Stuyvesant, William Penn.

THIRD TERM-SPRING.

Georgia (Oglethorpe). Review of three type colonies, characteristics of each clinched and the other ten clustered around these three.

French and Indian War; biographies of Franklin, Washington and Braddock.

NATURAL SCIENCE.

FIRST TERM-FALL.

Study of seeds and fruits and the preparation of plants and animals for winter.

SECOND TERM-WINTER.

The lever-- first, second, and third class, also compound; many practical illustrations.

THIRD TERM--SPRING.

Germination, spring flora.

READING.

FIRST TERM-FALL.

Courtship of Miles Standish. Sight reading from Stories of American Life and Adventure by Edward Eggleston.

SECOND TERM-WINTER.

Ten Boys on the Road from Long Ago to Now-Jane Andrews. Sight reading from Stepping Stones to Literature for Sixth Grades—Arnold and Gilbert.

THIRD TERM-SPRING.

Grandfather's Chair—Hawthorne, or Evangeline by Longfellow. Birds and Bees by Burroughs. Sight reading as given continued.

GEOGRAPHY.

Europe. Type studies. Numerous comparisons with similar places studied in North America. Close the work with study of physical features of continent. Sand-modeling, chalk-modeling, and sketching.

ARITHMETIC.

FIRST TERM-FALL.

Review notation, numeration, simple rules. Properties of numbers, factoring, cancellation and straight-line analysis. See State Course of Study—sixth year—first, second and third months.

SECOND TERM-WINTER.

Fractions—State Course of Study—sixth year—fourth, fifth, and sixth months.

THIRD TERM-SPRING.

Complex fractions and decimals—State Course of Study—sixth year, seventh and eight months. C. and C. Advanced Arithmetic text for the year.

LANGUAGE—SPELLING—WRITING.

Continuation of work outlined for third grade. See page 54.

DRAWING FOR THE YEAR.

Continuation of studies in form, light and shade and perspective as in 3d, 4th, and 5th grades. Outdoor and indoor sketching. Color work in spring. Selections as before.

SEVENTH GRADE.

HISTORY.

Revolutionary War. Biographies.

English History. Early Britons. Coming of Saxons. Norman Conquest. Feudalism. Magna Charta. Period of discovery and exploration, colonization of America, growth of colonial possessions, causes and results of Revolution.

NATURAL SCIENCE.

FIRST TERM-FALL.

Seeds-Distribution and dissemination.

Physiology—Circulation, respiration, digestion, effects of alcohol and narcotics.

SECOND TERM-WINTER.

Heat-Connection and radiation.

Air pressure.

THIRD TERM-SPRING.

Trees-Pine, maple.

Birds-Robin, woodpecker, bluejay, black bird.

READING.

FIRST TERM-FALL.

Study of national poems bearing on history work, as Paul Revere's Ride, Lexington, Ballad of the Boston Tea Party, Grandmother's Story of Bunker Hill. Tales of the White Hills—Hawthorne. Sight reading from Stepping Stones to American Literature—Arnold and Gilbert.

SECOND TERM-WINTER.

Vision of Sir Launfal-Lowell.

Marmion-Scott.

Sight reading from Carpenter's Asia.

THIRD TERM-SPRING.

Tales of a Grandfather—Scott.

Sight reading continued in texts given for two previous terms.

Sharp Eyes and Other Papers—Burroughs.

GEOMETRY AND ARITHMETIC.

FALL TERM.

Lines and angles, circles, arcs and angles, rectangles, and triangles.

WINTER TERM.

Quadrilaterals, circles and lines.

SPRING TERM.

Polygons and simple applications in solid geometry.

Proofs and generalizations based on the construction and superposition of figures; at all times the work is intended to lap over and illuminate arithmetical processes.

See State Course of Study for eighth year.

GRAMMAR OR GERMAN.

Pupils may take either German or grammar for the year.

Grammar—The sentences, parts, classes, classification of parts of speech. Oral presentation.

, German—Praktische Anfangs gründe—Stüven. Preparatory Book of German Prose—Boisen.

Essay work based on other studies throughout year.

DRAWING.

Continuation of work of sixth grade with more difficult studies. Water color work.

GEOGRAPHY.

Type studies from Asia, Africa, South America, and the Islands of the Sea, treated as in sixth grade.

EIGHTH GRADE.

HISTORY FOR YEAR.

Review American History in light of preceding English History; Critical period, growth and development of Union, War for Union, reconstruction and later development.

NATURAL SCIENCE.

FIRST TERM-FALL.

Air—Elasticity, expansion, air currents, air pressure, barometer. Manual work in application of scientific principles; construction of pump and barometer. Or—

Heat—Evaporation, condensation, construction of steam engine, study of thermometers.

SECOND TERM-WINTER.

Magnetism and Electricity. Construction of electric bell system; telephone and telegraph.

THIRD TERM-SPRING.

Animal life in ponds and brooks—the fish as a type. Germination and fertilization.

READING FOR THE YEAR.

Rolfe's Tales of Chivalry, by Scott.

Merchant of Venice and Julius Cæsar.

Lady of the Lake-Scott.

Short prose and poetical selections bearing on history, c. g., Lincoln's Gettysburg Speech.

MATHEMATICS.

FIRST AND SECOND TERMS.

Business Arithmetic as outlined in State Course of Study for seventh year.

THIRD TERM-SPRING.

Algebra—Giffin's Grammar School Algebra to p. 52. Exercises in algebraic language. Addition, subtraction, multiplication, and division. Simple equations.

GRAMMAR OR LATIN.

In this year Latin is accepted as an alternative from grammar from those who desire to begin Latin at this time in order to be better prepared for High School or Normal School work.

Latin—Fall term to p. 67, winter term to p. 125, spring term to end of Collar and Daniell's First Latin Book.

Grammar—Analysis of sentences, detailed study of parts of speech. Essay work based on other studies.

DRAWING.

History of Art, illustrated by pen and ink sketches and collection of Perry pictures and blue prints.

Water color work.

HIGH SCHOOL COURSE OF STUDY.

NINTH YEAR.

First Term.	Second Term.	Third Term.
English	*English	*English
Algebra	Algebra	Algebra
*Spelling (Word Ana	lysis) Drawing	Music
Drawing	Ancient History	Ancient History

TENTH YEAR.

First Term.	Second Term.	Third Term.
*English	English	English
Algebra	Geometry (Plane)	Geometry (Plane)
Med. History	*Modern History	U. S. History
Zoology	Physiology	*Botany

ELEVENTH YEAR.

First Term.	Second Term.	Third Term.
English	English	English
Geometry (Plane)	Geometry (Solid)	Physical Geography
Physics	Physics	*Chemistry
